Let's Start!

Using metrics right will make the team more productive.

Learning Outcome:

Describe ways of solving problems and getting things done in written and spoken situations and in work and social contexts.

Define strategies for validation of user and operation manuals, responding to the needs and customer satisfaction in the proposed IT solution, according to the organization policies.

Can Do Statements:

- I can understand written information about the expected things to find in a metrics program.
- I can talk about the kinds of metric that are useful for management.
- I can write a simple text about the importance of a test metrics program in the organization I work for.

Ask your partner:

- What can a company do to improve its productivity?
- How can a company know that the production is high or low?

Let's Explore!

The prosperity of our company depends on how good we address metrics.

Instructions: Read the text below.

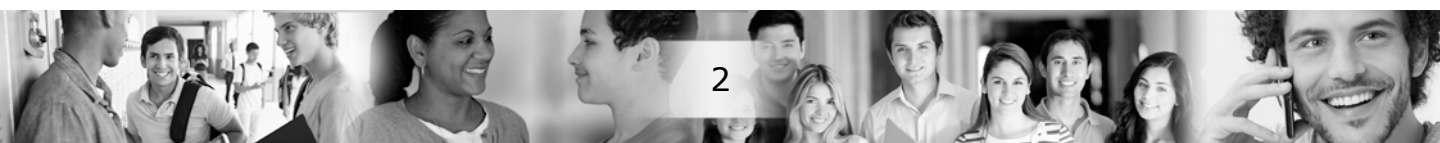

The good use of metrics can be the definitive factor that takes an organization to be the king of the hill or to go bankrupt. What test metrics do is to allow the organization to know about the state of the company and therefore, propels it to take over the reins of the development of actionable steps which lead to the improvement of the organization's performance.

My clients concerned with test metrics usually ask the team of experts what the most important kinds of metrics for an organization are. What the experts often say is that that there are two main types of metrics: those which impact the overall project and the ones that are internally focused and mainly aimed towards the testing organization.

The experts added that the former ones included metrics such as the testing of effectiveness, schedule adherence, and the requirement stability. The purpose of these metrics is to identify possible delays or defects in production among other issues. Most experts state that based on these metrics, the organization should identify means to improve the organization's performance in order to benefit the stakeholders.

The experts further explain that what the latter type includes is metrics such as defect severity, number of defect, or cost of quality, which are targeted towards the testing department alone. Therefore, they'll only affect the internal improvement.

Finally, on the annual metrics seminar, most organizations inquired how they could guarantee the success of their metrics program. Experts answered that they had to define, on the one hand, what they wanted to achieve in the organization; and on the other, a guideline for program implementation, data collection and analysis, and reporting tools. Paying attention to both types of metrics and ensuring that the results are used to improve them will impulse the organization's growth.

Let's Practice!

Philip explains what clients and companies expect to find in a metrics program.

Instructions: Write the missing words. Use the correct option from the table according to the number of the sentence.

1	2	3	4	5
What companies expect	what is clients	is what clients	clients what hope	What want most organizations
What expect the companies	are what clients	are what clients	what clients hope	What organizations most want
What companies expected	what clients is	what clients are	what hope clients	What most organizations want

- _____ in a metrics program is to know the state of the organization in general.
- Actionable steps which lead to improvement _____ hope to find in a good metrics program.
- Testing effectiveness and schedule adherence metrics _____ expect to find in the general type of metrics.
- Usually, _____ to improve with a metrics program is the organization's performance.
- _____ to achieve with a metrics program is growth and success.

Let's Practice!

Philip tells about his experiences on the kinds of metrics useful for management.

Instructions: Mark the correct answer to complete the sentences.

- Mr. Thompson _____ were two kinds of useful metrics for management.
 - told you that there
 - told me that there
 - told that there
- Managers _____ the first kind of metrics to impact an overall project.
 - say we use
 - say to us that we use
 - say that we use
- On the other hand, _____ second kind of metrics is more for internal improvement.
 - they say that the
 - they said that the
 - they said us that the
- Also, our clients _____ kind of metrics we were using.
 - asked us that
 - asked us what
 - asked to us what
- So, Mr. Thompson advised _____ use the second kind of metrics to manage my company.
 - that I could
 - me what I could
 - me that I could

Extension Activity

Now, make a mind map explaining what a test metrics program is.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Look for extra information about a metrics program.
- Create a mind map explaining what a metrics program is and its kinds of metrics.
- Share your mind map with classmates and discuss about the kinds of metrics of a metrics program.

Self-Assessment

Yes No

1. I look for further information about metrics program.

☐ ☐

2. I express information through a mind map.

☐ ☐

3. I share ideas with partners.

☐ ☐

Target Words

- former** (adjective): the first mention object from two.
e.g. The experts added that the former ones included metrics such as the testing of effectiveness, schedule adherence, and the requirement stability.
- take over the reins** (expression): to take control of something.
e.g. What test metrics do is to allow the organization to know about the state of the company and therefore, propels it to take over the reins of the development of actionable steps which lead to the improvement of the organization's performance.
- propel** (verb): to start something.
e.g. What test metrics do is to allow the organization to know about the state of the company and therefore, propels it to take over the reins of the development of actionable steps which lead to the improvement of the organization's performance.

- go bankrupt** (expression): to no longer be able to pay one's debts.
e.g. The good use of metrics can be the definitive factor that takes an organization to be the king of the hill or to go bankrupt.
- king of the hill** (expression): the best or superior one at something.
e.g. The good use of metrics can be the definitive factor that takes an organization to be the king of the hill or to go bankrupt.
- latter** (adjective): the last mentioned object from two.
e.g. Experts further explain that what the latter type includes is metrics such as defect severity, number of defect, or cost of quality which are targeted towards the testing department alone.

Learning Points

“What” Clauses and Long Noun Phrases as Subjects

We can use **what-clauses** and **long noun phrases** as subjects when we want to give more information about the subject of a sentence.

To begin with, a clause always contains a subject and a verb. This clause can work either as an independent clause or a dependent clause.

'What' clauses are dependent clauses and can work as the subject of a sentence.

Example:

What the metric program does is to evaluate the performance of the project.

In this example, the part of the sentence that is in bold is the subject of the main verb of the sentence, the verb 'is'. Notice that in the 'what' clause, we have a subject 'metric program' and a verb 'does'.

Usually, the verb used for the subject clause is going to be the verb 'to be'. Nevertheless, other verbs are also possible.

Example:

What the golden rules for metrics proposed **helped** us a lot to improve the metric program.

In this last example, the main verb of the sentence is the verb 'to help'. Note that we can conjugate the main verb of the sentence in different tenses, but as the subject of the verb is going to be a clause. The verb must be conjugated in the third person singular. A long noun phrase as a subject refers to a group of words that form a noun phrase that has the function of subject in a sentence.

Example:

Evaluating the metrics we use is very important for the organization.

In this example, 'Evaluating the metrics we use' is the subject of the verb 'is'. For a noun phrase, just as in a 'what' clause, we are going to conjugate the verb of the noun phrase in the third person singular.

Examples

- *The good use of metrics can be the definitive factor that takes an organization to be the king of the hill or to go bankrupt.*
- *What test metrics do is to allow the organization to know about the state of the company and therefore, propels it to take over the reins of the development of actionable steps which lead to the improvement of the organization's performance.*
- *My clients concerned with test metrics usually ask the team of experts what the most important kinds of metrics for an organization are.*
- *Paying attention to both types of metrics and ensuring that the results are used to improve will impulse the organization's growth.*
- *What the experts often say is that there are two main types of metrics.*

Learning Points

Reported Speech Questions and Statements

We use the **reported speech** when we want to inform what someone said or asked. In this section, we are going to review the reported speech in statements and questions.

To start with, we need to remember that, in the **reported speech**, the verb tenses change depending on the verb that introduces the reported statement or question. When we are going to report a statement, we generally introduce it with **'that'**.

Example:

*The experts say **that** we should use test metrics properly.*

For the reported speech, the most common verbs we are going to use are the verbs **'say'** and **'tell'**. We use **'say'** when we do not mention the person who the speaker is talking to like in the previous example. If we use the verb **tell**, we are going to clarify who the speaker is talking to.

Example

*The experts told the manager **that** we should use test metrics properly.*

Nevertheless, we can have other verbs in the reported speech such as "state", "mention", "advice", "recommend", "promise", and other verbs that can introduce what another person said.

On the other hand, for the reported speech in questions, we are not going to use 'that' to introduce the reported question but instead, we can use 'whether' or 'if'. In the reported speech in questions, instead of using verbs like 'say' or 'tell' for introducing the reported question, we are going to use verbs like 'ask' or 'inquire'.

Example

*The experts inquired **what** metrics we **were** using.*

*The experts asked us **how** we **used** the test metrics.*

*The experts inquired **if** we used test metrics.*

Notice that as the questions are indirect and not direct, we do not place the verb before its subject.

Examples

- *My clients concerned with test metrics usually ask the team of experts what the most important kinds of metrics for an organization are.*
- *The experts added that the latter ones included metrics such as the testing of effectiveness, schedule adherence, and the requirement stability.*
- *Most experts state that based on these metrics, the organization should identify means to improve the organization's performance in order to benefit the stakeholders.*
- *Most organizations inquired how they could guarantee the success of their metric program.*
