Let's Start!

Metrics can be counterproductive if used inappropriately.

Learning Outcome:

Describe ways of solving problems and getting things done in written and spoken situations and in work and social contexts.

Train the system users on application structuring and management, according to the established plan and user profile, according to the organization policies.

Can Do Statements:

- I can talk about the reasons why some test metric programs fail.
- I can list some rules of testing metrics management.
- I can discuss the importance of rules in a testing metrics program.

Ask your partner:

- Why do you think the implementation of metrics can fail sometimes? How should metrics be chosen?
- What important parameters do you think need to be taken into account when using metrics?

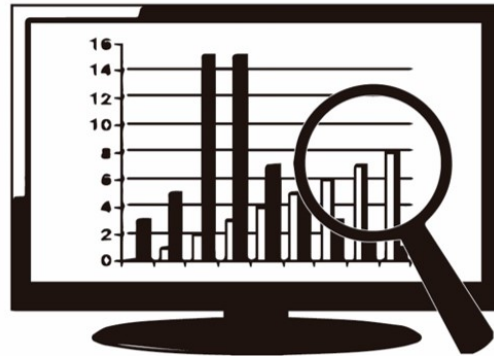

Let's Explore!

Let's get down to brass tacks!* We need to understand what metrics are for.

* We use the expression 'get down to brass tacks' when we want to talk about the essential facts about something.

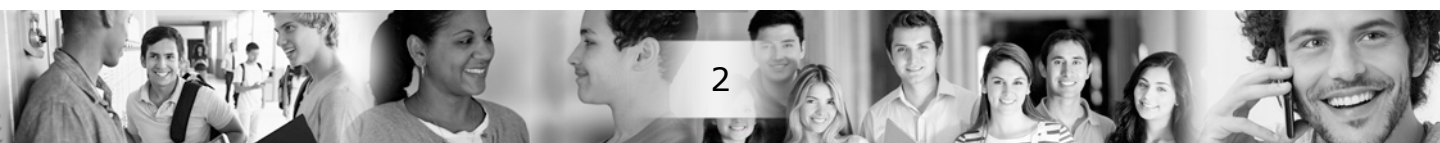

Instructions: Read the text below.

Implementing test metric programs is being noted as one of the best ways to assess and improve the performance of an organization. Nevertheless, the task of finding meaningful metrics has been underrated by many organizations, as they fail to aim the results of these metrics toward the implementation of actionable steps for continuous improvement.

As one of my colleagues would say, test metrics are not being focused on the enhancement of the organization if they have not been chosen taking into account what the organization truly wants to achieve, and if their results are not being targeted to carry out a systematic planning for improvement.

However, if the golden rules for metrics are being used by an organization, it's likely for this one to be taking the improvement of the organization's performance on the right track. These rules state that, first, every metric program must be reviewed by the executive leadership every quarter, so that he is up-to-date and aware of the state of the organization. Second, ensure that the IT and Business groups are being aligned with the metric program as all members of the organization should be coordinated with and working according to the principals of this organization. Third, ensure that the data is being collected under uniform standards, otherwise the interpretation of data is going to take more time. And fourth, once the data has been analyzed and trended, the organization will use these meaningful insights for planning how to improve.

Even though, applying these four rules is a difficult task to achieve; if they are being followed in the best way possible by an organization, they will significantly improve the usefulness of the metrics' results, and these metrics are going to be providing a more solid base to plan actionable steps for improvement.

Let's Practice!

Implementing test metric programs correctly is important for the improvement of an organization.

Instructions: Use the words from the box to correctly complete the sentences.

Word Bank

are being considered / is being gathered /
are not being targeted / are being used.

1. Test metric programs _____ as an effective way to assess and improve the performance of an organization.
2. Test metric programs results that _____ to carry out a systematic planning for improvement are useless.
3. Golden rules for metrics that _____ by an organization lead the organization's performance on the right track.
4. The data that _____ under uniform standards will take a short time for being interpreted.

Let's Practice!

Make sure your test metrics are useful for the organization.

Instructions: Organize the mystery sentence. Read the sentences aloud. Check your pronunciation with your instructor.

1. organizations. / been / has / by / forgotten / many / importance / The / finding / of / metrics / meaningful

2. improve / the / on / and / trended. / how / depends / Planning / to / that / data / been / analyzed

3. the / organization. / have / work / the / taking / goals / been / metrics / they / Test / account / of / selected / into / if

4. leadership. / been / reviewed / executive / have / program / Every / must / the / metric / by

Extension Activity

Making Your Own Rules

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Take a look at the golden rules previously described to ensure program testing success.
- Think about two or three new rules that you consider missing or that can complement the ones we already have.
- List them and explain them according to your experience in a paragraph of 200 words, using the passive of the present continuous and the passive of the present perfect.
- Share your ideas with your partners.

Self-Assessment

- | | Yes | No |
|--|-----------------------|-----------------------|
| 1. I check the rules we have to ensure program testing success. | ☐ | ☐ |
| 2. I think of two or three more rules I can add so I can complement the ones that already exist or cover missing areas of the ones we already know of. | ☐ | ☐ |
| 3. I list my own rules and explain them in a short paragraph of 200 words using the grammar topics of the lesson. | ☐ | ☐ |
| 4. I share my ideas and paragraph with the class. | ☐ | ☐ |

Target Words

- executive leadership** (noun): a person in charge of directing the employees by overseeing and organizing their activities.
e.g. These rules state that, first, every metric program must be reviewed by the executive leadership every quarter.
- be on the right track** (expression): to go in the right direction.
e.g. However, if the golden rules for metrics are being used by an organization, it's likely for this one to be taking the improvement of the organization's performance on the right track.
- trend** (verb): to show the tendency of something.
e.g. And four, once the data has been analyzed and trended, the organization will use these meaningful insights for planning how to improve.
- underrate** (verb): to value something less than it should be.
e.g. Nevertheless, the task of finding meaningful metrics has been underrated by many organizations.
- actionable steps** (expression): a group of processes that can be carried out to achieve or improve something.
e.g. They fail to aim the results of these metrics toward the implementation of actionable steps for continuous improvement.
- test metrics** (noun): the process through which the system, system component, or processes are measured in terms of their performance.
e.g. As one of my colleagues would say, test metrics are not being focused on the enhancement of the organization.

Learning Points

Passive of Present Continuous

We use the **passive voice** when we want to give more emphasis to the thing or person that is receiving the action rather than to the agent that is performing it.

Remember that we normally use the present continuous when we want to emphasize on the duration of the action or when we want to express that the action is occurring at the precise moment of speaking.

We can use the **passive voice of present continuous** when we want to express that the subject is receiving the action in this precise moment.

Example:

*I **am being told** that the metrics are not working as expected.*

We can either express the agent that is performing the action with the preposition '**by**', or, if the context permits it, keep the agent as implicit or unknown (check the example above).

Example:

*I am being told **by the manager** that the metrics are not working as expected.*

Thus, the structure we use for the passive voice with the present continuous is the following:

Person or thing that receives the action + verb 'to be' in present + being + past participle of main verb + complement.

Example:

*The metrics **are being evaluated**.*

Examples

- *Implementing test metric programs is being noted as one of the best ways to assess and improve the performance of an organization.*
- *If the golden rules for metrics are being used by an organization, it's likely for this one to be taking the improvement of the organization's performance on the right track.*
- *Ensure that the IT and Business groups are being aligned with the metric program as all members of the organization should be coordinated with, and working according to, the principals of this organization."*

Passive of Present Perfect

We use the **present perfect** when we want to either refer to an action that started in the past, but may not have finished yet, or to talk about experiences.

Learning Points

We use the passive of **present perfect** when we want to express that an action has occurred and impacted a thing or person. This means that the thing or person could have received the action recently or that it has experienced that action in an unknown moment in the past.

Example:

*The rules for testing metrics **have already been determined**.*

The structure of the **passive of the present perfect** is the following:

Thing or person who receives the action (object) + verb 'to have' + been + past participle of main verb + complement.

Example:

*New testing metrics **have been introduced** to the program.*

These are some words you can use with the **present perfect**:

- Just
- Already
- Ever
- So far
- Recently
- Since

Examples

- *The task of finding meaningful metrics has been underrated by many organizations, as they fail to aim the results of these metrics toward the implementation of actionable steps for continuous improvement.*
- *As one of my colleagues would say, test metrics are not being focused on the enhancement of the organization if they have not been chosen taking into account what the organization truly wants to achieve and, if their results are not being targeted to carry out a systematic planning for improvement.*
- *Once the data has been analyzed and trended, the organization will use these meaningful insights for planning how to improve.*
